

# State of the Global Workplace 2022 Report

THE VOICE OF THE  
WORLD'S EMPLOYEES

*Discover how employees around the world  
experienced life and work last year.*

Employee Engagement and Life Evaluation | Daily Negative Emotions  
Environmental, Social and Governance | Job Market

GALLUP®

*Gallup is committed to bringing the voice of the employee to the decision-making table as we help global leaders solve their most pressing problems. In this report we feature annual findings from the world's largest, ongoing study of the employee experience. We examine how employees feel about their work and their lives, an important predictor of organizational resilience and performance.*

## FROM THE CEO

### **81,396 hours.**

That's how much of life most of us spend working.<sup>1</sup> The only thing we spend more time doing is sleeping.

If we spend so much of life at work, how is life at work going?

According to the world's workers, not well. Gallup finds 60% of people are emotionally detached at work and 19% are miserable.<sup>2</sup>

But is that a surprise, or a statistical explanation of the obvious?

The idea that "work sucks" is everywhere. It's been the subject of ancient philosophers, world leaders, your colleagues and even pop culture. Comedian George Carlin once quipped, "Oh, you hate your job? Why didn't you say so? There's a support group for that. It's called EVERYBODY, and they meet at the bar."

Carlin's joke works because it's true — but workplace misery isn't funny. Being miserable at work can bring more suffering to a person's life than being unemployed.

### **The False Workplace Proverb**

"Find a job that you enjoy doing, and you will never have to work again in your life." This quote is often misattributed to Mark Twain or Confucius.<sup>3</sup> But regardless of where it came from, the popular adage has a different problem: It's not true.

"Work," according to Oxford Languages, is "activity involving mental or physical effort done in order to achieve a purpose or result." Exerting mental or physical effort to achieve anything is rarely done without stress, worry or even pain.

Nobel laureate and best-selling author Daniel Kahneman once said there were "periods when he worked alone on writing that were 'terrible,' when he felt 'miserable.'" Stress, anxiety and maybe a little pain will always be part of a high-performing job, but those negative emotions cannot be the very soul of someone's job. Yet, that is exactly the work-life experience for the 19% of workers who are actively disengaged.

---

1 According to the Gallup World Poll, the average full-time worker spends 41.36 hours per week working. If you assume people work 48 weeks per year, it means people spend 1,985.28 hours per year working. Life expectancy is 73 and, according to the OECD, people retire at about 63. If people begin working at 22, then the average person works 41 years. Forty-one years of work at 1,985.28 hours per year is 81,396 total hours. This estimate is conservative and may even be low; another estimate finds that people work over 115,000 hours in a lifetime.

2 Gallup's technical term for being miserable at work is "actively disengaged." The terms for thriving at work and emotionally detached at work are "engaged" and "not engaged."

3 It first appeared in the 1982 *Princeton Alumni Weekly*. The periodical quoted a Princeton professor, quoting some "old-timer" he knew (thanks, *Quote Investigator*).

Ask them, “Did you feel stress yesterday?” — 59% will say “yes.” Ask them, “Did you feel worried yesterday?” — 56% will say “yes.” Ask them, “Did you feel physical pain a lot of the day yesterday?” — 33% will say “yes.” And, “How about anger?” — 31% will say “yes.” These figures are staggering — and 46% to 83% higher than an engaged person would report.

---

## A Better Way?

The pain from work has caused leaders to invent new ways to get as far from work as possible. Movements to attain “work-life balance,” implement four-day workweeks and expand remote work are now everywhere. But it’s not just the hours, imbalance or location that leave workers unhappy. It’s what’s happening at work that makes them miserable.

For example, balance is essential, but it implies a work/life separation. Emotionally compartmentalizing work, or anything in life, is hard. Even if your boss can’t call or email you after 5 p.m., you probably haven’t recovered from the berating he gave you earlier in the day. It’s almost impossible to leave that kind of emotional baggage at work. In a Gallup study in Germany, 51% of actively disengaged workers said job stress caused them to behave poorly with loved ones.<sup>4</sup>

So, what makes a bad job?

In one of the largest studies of burnout, Gallup found the biggest source was “unfair treatment at work.” That was followed by an unmanageable workload, unclear communication from managers, lack of manager support and unreasonable time pressure.

Those five causes have one thing in common: your boss. Get a bad one and you are almost guaranteed to hate your job. A bad boss will ignore you, disrespect you and never support you. Environments like that can make anyone miserable. A manager’s effect on a workplace is so significant that Gallup can predict 70% of the variance in team engagement just by getting to know the boss.

---

## Thriving at Work

Improving life at work isn’t rocket science, but the world is closer to colonizing Mars than it is to fixing the world’s broken workplaces.

Stakeholder capitalists think they have the solution. Using environmental, social and governance (ESG) metrics, they encourage companies to report on their impact on everything from the environment to their workforce. But when it comes to the worker, most ESG reports focus solely on pay and demographics. These are critical, but how do we know if workers are being treated with respect? Or feel cared about?

The real fix is this simple: better leaders in the workplace. Managers need to be better listeners, coaches and collaborators. Great managers help colleagues learn and grow, recognize their colleagues for doing great work, and make them truly feel cared about. In environments like this, workers thrive.

---

<sup>4</sup> “Bringing Work Problems Home” by Steve Crabtree,  
<https://news.gallup.com/businessjournal/1078/bringing-work-problems-home.aspx>

For 79% of workers, this kind of work environment may seem like a pipe dream, but for 21% of workers, it's a reality. They still have days with stress, worry and pain — but at half the rate as people who are actively disengaged at work. In fact, 95% of people who are thriving at work report being treated with respect all day and 87% report smiling and laughing a lot.

Stakeholder capitalists would love the idea of more respect and care in the workplace, but will shareholder capitalists? *"How does this impact the bottom line?"* they'd ask. Well, as it turns out, it pays to have thriving workers.

Business units with engaged workers have 23% higher profit compared with business units with miserable workers. Additionally, teams with thriving workers see significantly lower absenteeism, turnover and accidents; they also see higher customer loyalty. The point is: Wellbeing at work isn't at odds with anyone's agenda.

Executives everywhere should want the world's workers to thrive. And helping the world's workers thrive starts with listening to them. Hear what they have to say about how life at work is going in this year's *State of the Global Workplace* report.

A handwritten signature in black ink, appearing to read "Jon Clifton". The signature is fluid and cursive, with the first letter of each word being significantly larger and more stylized than the others.

CEO

# Executive Summary

*2021: As the Pandemic Raged On, the Global Employee Burned Out*

## COVID-19 Deaths

**1.9M**  
*by the end of 2020*

**3.5M**  
*in 2021*

**IN 2021, GLOBAL WORKERS REMAINED UNDER THE HEAVY BURDEN** of the COVID-19 pandemic. Although the development and delivery of effective vaccines offered hope that we were past the worst of the pandemic, more people died of COVID-19 in 2021 than 2020. Some regions saw signs of partial recovery, but others were significantly worse off than they were in the first year of the pandemic.

# 1. Global employee vital signs — engagement and wellbeing — remain stable but not great.

Learn how Gallup helps organizations like yours harness human potential to improve business outcomes through [employee engagement](#).

Do employees find their work meaningful and rewarding? Do they think their lives are going well? Do they feel hopeful about the future? The short answer is that most employees around the world would answer “no” to all three questions.

Prior to the pandemic, engagement was rising globally, but progress has stalled. Engagement rose by 1 percentage point in 2021, but remained below its 2019 peak.

Although global wellbeing also rose by 1 percentage point, this masks larger regional differences. For example, the Australia and New Zealand region saw a 6-percentage-point increase in thriving in the past year, while Europe saw a 5-percentage-point decrease.

Clearly, the COVID-19 pandemic era put a halt to a long period of gradual but general improvement among the world’s workers. This matters for global economic dynamism. *Gallup estimates that low engagement costs the global economy US\$7.8 trillion and accounts for 11% of GDP globally.* [Gallup’s analysis of 112, 312 business units](#) in 96 countries found a strong link between engagement and performance outcomes, such as retention, productivity, safety and profitability.

**21%**  
*of employees are engaged at work.*

**33%**  
*of employees are thriving in their overall wellbeing.*

## Employee Engagement and Life Evaluation

● % Engaged ● % Thriving

## 2. Stress among the world’s workers reached an all-time high — again.

Help your employees manage negative emotions and curb burnout by focusing on employee wellbeing.

# 44%

of employees experienced stress a lot of the previous day.

In 2020, the world’s workers reached an all-time high for experiencing stress during a lot of the previous day. In 2021, this percentage went even higher. Those who agreed with this item may not have been stressed about work, but they were certainly stressed at work. Inevitably, the stress workers feel impacts the workplace. And while 2021 saw declines in worry, sadness and anger, all these negative emotions remained above pre-pandemic levels.

*Note: Working women consistently report higher levels of stress across the world than working men. In the U.S. and Canada region, one in two employed women say they experienced stress a lot of the previous day.*

### Daily Negative Emotions

Did you experience the following feelings during A LOT OF THE DAY yesterday? How about [worry, stress, anger, sadness]?

### 3. Europe and South Asia were hit particularly hard in 2021 by COVID-19 waves.

# 11%

*of employees in South Asia are thriving —  
the lowest regional wellbeing in the world.*

Both South Asia (which includes India) and Europe dropped 5 percentage points in wellbeing in the past year. South Asia had the lowest wellbeing in the world at 11%.

Although Gallup surveys were delivered shortly after COVID-19 variant waves, the results show just how shaken these regions were. When measuring wellbeing, Gallup asks respondents two questions: 1) how they rate their current life and 2) how they expect their life to be five years from now. In South Asia and Europe, both these evaluations went down. This means that not only did workers in these regions feel their current life was worse, but their hope for the future dropped as well. In addition, reported health problems increased by 4 percentage points in Europe, even as they fell in the majority of regions around the world, according to additional Gallup analysis.

*Note: Employed women in South Asia reported the highest levels of daily anger and being disrespected in the world in 2021.*

## 4. The job market made a remarkable recovery in the U.S. and Canada region — but not elsewhere.

[Connect with Gallup](#) to explore how we can help you hire, retain and develop engaged and thriving employees who boost your business outcomes.

# 45%

*of employees said now is a good time to find a job.*

Forty-five percent of employees said now is a good time to find a job, up slightly from last year, but less than the record 55% in 2019.

The regional outlier for this item is the United States and Canada, which leads the world at 71%, up 44 percentage points from the previous year. The next closest regions are Australia and New Zealand at 59% and South Asia at 50%.

The regions with the least promising job opportunities are the Commonwealth of Independent States (35%), MENA (28%) and East Asia (27%).

*Note: Gallup did not collect data from China on this item in 2021.*

### Job Market

*Thinking about the job situation in the city or area where you live today, would you say that it is now a good time or a bad time to find a job?*

● % Good Time

5. For all its challenges, the U.S. and Canada region remains the best region in the world to be an employee.

**No. 1** *Employee Engagement*      **No. 2** *Wellbeing*

**No. 1** *Job Opportunities*      **No. 2** *Living Comfortably*

Despite employees in the United States and Canada region being some of the most worried and stressed workers in the world, the region also has the most engaged employees. The United States and Canada region is No. 2 for wellbeing and No. 2 for the largest increase in wellbeing in 2021. Just over half of employees say they are “living comfortably” on their household income (vs. 22% globally), and the job market in 2021 in the United States and Canada region was exceptionally good, compared with the rest of the world.

## 6. Employee wellbeing is the new workplace imperative.

*Globally, employee engagement and wellbeing remain very low, and it's holding back enormous growth potential.*

**Engagement and wellbeing interact with each other in powerful ways.** We often think of engagement as something that happens at work and wellbeing as something that happens outside of work, but Gallup's analysis suggests that's a false dichotomy.

- How people experience work influences their lives outside of work. Employees who consistently experience high levels of burnout at work say their job makes it difficult to fulfill their family responsibilities. They are also 23% more likely to visit the emergency room.
- Overall wellbeing influences life at work. Employees who are engaged at work but not thriving have a 61% higher likelihood of ongoing burnout than those who are engaged and thriving.

When Gallup looks at our global workplace data through engagement and thriving combined, the results are striking.

### Stress Yesterday

**49%** Not Thriving-Not Engaged

**30%** Thriving-Engaged

### Anger Yesterday

**24%** Not Thriving-Not Engaged

**11%** Thriving-Engaged

### Health Problems

**16%** Not Thriving-Not Engaged

**8%** Thriving-Engaged

When employees are engaged and thriving, they experience significantly less stress, anger and health problems. Nevertheless, globally, only 9% of employees are in that thriving and engaged category — while the majority (57%) of the world's employees are not engaged and not thriving.

**Organizations need to think about the whole person, not just the worker.** Leaders need to add wellbeing measurements to their executive dashboards. This can alert them to critical warning signs that do not show up on traditional spreadsheets. They also need to prioritize employee wellbeing as part of their employer brand promise. When leaders take responsibility for the wellbeing of their workers, the result is not only productive organizations, but thriving individuals, families and communities.

### LIFE EVALUATION

Please imagine a ladder with steps numbered from zero at the bottom to 10 at the top. Suppose we say that the top of the ladder represents the best possible life for you, and the bottom of the ladder represents the worst possible life for you.

On which step of the ladder would you say you personally feel you stand at this time? (0-10)

Just your best guess, on which step do you think you will stand in the future, say about five years from now? (0-10)

Rank	Country	Change*	% Thriving	Rank	Country	Change*	% Thriving

### LIFE EVALUATION

Please imagine a ladder with steps numbered from zero at the bottom to 10 at the top. Suppose we say that the top of the ladder represents the best possible life for you, and the bottom of the ladder represents the worst possible life for you.

On which step of the ladder would you say you personally feel you stand at this time? (0-10)

Just your best guess, on which step do you think you will stand in the future, say about five years from now? (0-10)

Rank	Country	Change*	% Thriving	Rank	Country	Change*	% Thriving

## LIFE EVALUATION

Please imagine a ladder with steps numbered from zero at the bottom to 10 at the top. Suppose we say that the top of the ladder represents the best possible life for you, and the bottom of the ladder represents the worst possible life for you.

On which step of the ladder would you say you personally feel you stand at this time? (0-10)

Just your best guess, on which step do you think you will stand in the future, say about five years from now? (0-10)

Rank	Country	Change*	% Thriving

## Appendix 2: Methodology

The primary data in this report come from the Gallup World Poll, through which Gallup has conducted surveys of the world's adult population, using randomly selected samples, since 2005. The survey is administered annually face to face or by telephone, covering more than 160 countries and areas since its inception. In addition to the World Poll data, Gallup collected extensive random samples of working populations in the United States and Germany; these samples were also added to the dataset.

The target population of the World Poll is the entire civilian, noninstitutionalized, aged-15-and-older population. Gallup's data in this report reflect the responses of adults, aged-15-and-older, who were employed for any number of hours by an employer.

With some exceptions, all samples are probability-based and nationally representative. Gallup uses data weighting to minimize bias in survey-based estimates; ensure samples are nationally representative for each country; and correct for unequal selection probability, nonresponse and double coverage of landline and mobile phone users when using both mobile phone and landline frames. Gallup also weights its final samples to match the national demographics of each selected country.

Regional findings in this report include data obtained from 2021 to as late as March 2022 (reported as part of 2021 data in this report). To determine percentage point changes for regions, Gallup uses data from 2020 and 2021 from the same countries in each region.

Country-specific findings in "Appendix 1: Country Comparisons" are based on data aggregated from three years of polling (2019, 2020 and 2021 — with several countries' 2021 data obtained in early 2022). Percentage point changes for countries indicate the differences in percentage points when comparing the average from 2018, 2019 and 2020 with the average from 2019, 2020 and 2021.

Gallup typically surveys 1,000 individuals in each country or area, using a standard set of core questions that has been translated into the major languages of the respective country. In some countries, Gallup collects oversamples in major cities or areas of special interest. Additionally, in some large countries, such as China and Russia, sample sizes include at least 2,000 adults. In a small number of countries, the sample size is less than 1,000. In this report, Gallup does not provide country-level data (aggregate of 2019, 2020 and 2021 data) or country-level percentage point change data (aggregate of 2018, 2019 and 2020 data) for any country that has an aggregate n size of less than 300.

For results based on the total sample of adults **globally**, the margin of sampling error ranged from  $\pm 0.5$  percentage points to  $\pm 0.7$  percentage points at the 95% confidence level. For results based on the total sample of adults in each **region**, the margin of sampling error ranged from  $\pm 0.6$  percentage points to  $\pm 5.0$  percentage points at the 95% confidence level. For results based on the total sample of adults in each **country**, the margin of sampling error ranged from  $\pm 0.5$  percentage points to  $\pm 8.5$  percentage points at the 95% confidence level. All reported margins of sampling error include computed design effects for weighting.

Gallup is entirely responsible for the management, design and control of the Gallup World Poll. For more than 80 years, Gallup has been committed to the principle that accurately collecting and disseminating the opinions and aspirations of people around the globe is vital to understanding our world. Gallup's mission is to provide information in an objective, reliable and scientifically grounded manner. Gallup is not associated with any political orientation, party or advocacy group and does not accept partisan entities as clients. Any individual, institution or governmental agency may access the Gallup World Poll regardless of nationality. The identities of clients and all surveyed respondents remain confidential.

The World Poll monitors the issues that matter most to societies worldwide, such as personal safety, food and shelter, employment, wellbeing and confidence in national institutions. In addition to conducting our core polls, organizations worldwide turn to Gallup to conduct custom surveys using our rigorous research standards and scientifically proven methodologies to help them solve their most pressing problems.

## Appendix 3: Support Information

### Employee Engagement

Employee engagement reflects the involvement and enthusiasm of employees in their work and workplace. Gallup categorizes an organization's employees as engaged, not engaged or actively disengaged. Employees can become engaged when their basic needs are met and when they have a chance to contribute, a sense of belonging, and opportunities to learn and grow.

**Engaged employees** are highly involved in and enthusiastic about their work and workplace. They are psychological "owners," drive performance and innovation, and move the organization forward.

**Not engaged employees** are psychologically unattached to their work and company. Because their engagement needs are not being fully met, they're putting time — but not energy or passion — into their work.

**Actively disengaged employees** aren't just unhappy at work — they are resentful that their needs aren't being met and are acting out their unhappiness. Every day, these workers potentially undermine what their engaged coworkers accomplish.

To determine the percentage of engaged, not engaged and actively disengaged employees, Gallup uses a proprietary formula founded on extensive research about how the engagement elements, as measured by the Gallup Q<sup>12</sup>, relate to various workplace outcomes. For this reason, employee engagement is a much higher bar than merely satisfaction or metrics that combine "strongly agree" and "agree" responses into a "percent favorable" engagement index.

The current standard is to ask each employee (a census survey; median participation rate is 84%) to rate the Q<sup>12</sup> statements using six response options, from 5 = strongly agree to 1 = strongly disagree, and the sixth response option — don't know/does not apply — is unscored. Gallup's proprietary formula does not require perfect agreement with all Q<sup>12</sup> elements for employees to be classified as engaged.

## Gallup Q<sup>12</sup> Items

- Q01.** I know what is expected of me at work.
- Q02.** I have the materials and equipment I need to do my work right.
- Q03.** At work, I have the opportunity to do what I do best every day.
- Q04.** In the last seven days, I have received recognition or praise for doing good work.
- Q05.** My supervisor, or someone at work, seems to care about me as a person.
- Q06.** There is someone at work who encourages my development.
- Q07.** At work, my opinions seem to count.
- Q08.** The mission or purpose of my company makes me feel my job is important.
- Q09.** My associates or fellow employees are committed to doing quality work.
- Q10.** I have a best friend at work.
- Q11.** In the last six months, someone at work has talked to me about my progress.
- Q12.** This last year, I have had opportunities at work to learn and grow.

---

## Life Evaluation

Gallup's Life Evaluation Index, which is included as part of the standard set of core questions on the Gallup World Poll, measures respondents' perceptions of where they stand now and in the future.

Building on the Cantril Self-Anchoring Striving Scale,<sup>1</sup> Gallup measures life satisfaction by quantifying the difference between the best possible life and the worst possible life using a simple two-part question — Gallup's Best Possible Life Scale. Gallup asks respondents to place the status of their current and future lives on a "ladder" scale with steps numbered from zero to 10, where zero indicates the worst possible life and 10 the best possible life.

### Best Possible Life Scale Two-Part Question

Please imagine a ladder with steps numbered from zero at the bottom to 10 at the top. Suppose we say that the top of the ladder represents the best possible life for you, and the bottom of the ladder represents the worst possible life for you.

On which step of the ladder would you say you personally feel you stand at this time? (0-10)

Just your best guess, on which step do you think you will stand in the future, say about five years from now? (0-10)

---

<sup>1</sup> Cantril, H. (1965). *The pattern of human concerns*. New Brunswick, NJ: Rutgers University Press. The Cantril Self-Anchoring Striving Scale (ladder scale) was originated by pioneering social researcher Hadley Cantril in his 1965 book *The Pattern of Human Concerns*. George Gallup included the measure in his 1977 classic volume *Human Needs and Satisfaction: A Global Survey*, and it has been tracked in Gallup's World Poll since 2005.

## Thriving, Struggling and Suffering

Gallup classifies respondents into one of three categories of wellbeing — thriving, struggling or suffering — and determines the percentage of respondents in each category.

Individuals who rate their current life at a 7 or higher AND their future life as an 8 or higher are “thriving.” Individuals are “suffering” if they rate their current AND future lives at 4 or below. All other individuals are “struggling.”

**Thriving:** These respondents have positive views of their present life situation (7 or higher rating on best life present) and have positive views of the next five years (8 or higher rating on best life future). They report significantly fewer health problems and less worry, stress, sadness, depression and anger. They report more hope, happiness, energy, interest and respect.

**Struggling:** These respondents struggle in their present life situation and have uncertain or negative views about their future. They report more daily stress and worry about money than thriving respondents do.

**Suffering:** These respondents report that their lives are miserable (4 and below rating on best life present) and have negative views of the next five years (4 and below on best life future). They are more likely to report that they lack the basics of food and shelter and more likely to have physical pain and a lot of stress, worry, sadness and anger. They have less access to health insurance and care and more than double the disease burden compared with thriving respondents.

---

## Daily Negative Emotions

Gallup annually surveys around the world to determine people’s experiences of daily emotions. This report focuses on the emotional experiences of employed adults. For further data on the emotions of all adults globally, please see our most recent [Global Emotions Report](#).

---

## Environmental, Social and Governance (ESG)

ESG refers to environmental, social and governance criteria for evaluating organizational success beyond profit. It challenges leaders to move away from a sole focus on short-term profit to long-term sustainability and the interests of all stakeholders. Ultimately, it is a redefinition of success in business — beyond wealth creation, toward making the world, the planet and its people better over the long term.

For the item “Is corruption widespread within businesses located in [country], or not?” Gallup removed all “Don’t know” or “N/A” responses and recalculated the past data trend for this item. This updated calculation will be used in the 2022 report and moving forward.

## Job Market

As part of the State of the Global Workplace report, Gallup reports data on other questions that may be relevant to world leaders. In 2021, we reported on COVID-19-related questions. This year, we reported on the following job-market-related items:

- Thinking about the job situation in the city or area where you live today, would you say that it is now a good time or a bad time to find a job? (Response options: Good time/ Bad time)
  - In this report, we are reporting on the percentage of employees who selected the "Good time" response for this item.
- In the next 12 months, are you likely or unlikely to move away from the city or area where you live? (Response options: Likely to move, Unlikely to move)
  - In this report, we are reporting on the percentage of employees who selected the "Likely to move" response for this item.
  - This item does not measure desire to migrate permanently from one country to another. See Gallup's global [Migration Research Center](#) for additional findings.
- Which one of these phrases comes closest to your own feelings about your household income these days? (Response options: Living comfortably on present income, Getting by on present income, Finding it difficult on present income, Finding it very difficult on present income)
  - In this report, we are reporting on the percentage of employees who selected the "Living comfortably" response for this item.
